FOREWORD

The first series of the Conchylien Cabinet published in 12 volumes between the years 1769 and 1829, is an excellent scholarly work of great importance to Malacology. Of particular importance are the figures, more than 4000, that serve as type concepts upon which we recognize many of the earliest molluscan names. These figures were frequently the first or only citation of 18th and early 19th century authors when naming, describing or listing a new species satisfying the rules of International Zoological Nomenclature.

The use of the Conchylien Cabinet was ruled out for the purposes of nomenclature because the authors did not employ a uniform binominal nomenclature established as a uniform procedure for naming species with the publication of the 10th edition of the Systema Naturae in 1758 by Carolus Linnaeus (later ennobled as Carl von Linné, 1761). However, because of the excellence of the figures in the Conchylien Cabinet, and because this was the first major iconograph in the field of Malacology, it was an essential tool for all early malacologists.

The value of the compilation of references made by Leonard Richardson, upon the advice and guidance of R. Tucker Abbott, is very great. In this work we have a research tool for the scholar involved in molluscan systematics and nomenclature. The value of the work is to provide the earliest use of the Martini-Chemnitz figures in molluscan systematics. Many valid species names were, in fact based on figures (and often names) in the iconograph.

There are probably fewer than 100 complete Martini-Chemnitz iconographs existing today. Many researchers around the world do not have access to this work. For this reason we included, through xerography, copies of all figures. We have had the benefit of this useful research tool in the Department of Malacology of ANSP for several years. Because it has been of great use, we are producing a limited number of this issue of Tryonia for that small number of serious systematists who will want this volume as part of their reference library.

The dates of publication for the 12 volumes of the first series of Martini-Chemnitz Conchylien Cabinet are as follows:

ACKNOWLEDGMENT

We acknowledge the superb work of Mr. Gary Rosenberg in producing the plates, editing, and compilation.

EARLY REFERENCES TO THE FIGURES IN THE CONCHYLIIEN CABINET

OF MARTINI AND CHEMNITZ: VOLUMES I-XII

INTRODUCTION

This compilation was suggested to the writer by Dr. R. T. Abbott about 1957. It was continued over several years on a part time basis, and was a manuscript in the Malacological Library of the Academy of Natural Sciences of Philadelphia since that time.

The works consulted were:

- 1769 - Martini & Chemnitz: Conchylien Cabinet Vol. I-XII
- 1776 - DaCosta: Elements of Conchology (no Chemnitz references)
- 1771 - Linne: Mantissa
- 1778 - 1780 Born: Index Rerum Naturalium Musei Caesarei Vindobonensis Pars I, Testacea, Vindobon
- 1789 - 1792 Bruguiere: Encyclopedie Methodique Vol. I pp. 1-758
- 1791 - Gmelin: Systema Naturae, 13th Ed.
- 1798 - Röding: Museum Boltenianum pt. 2, Hamburg
- 1801 - 1802 Bosc: Histoire Naturelle des Coquilles Vol. I-V
- 1802 - Holten: Enumeratio systematica Conchyliorum (See also Proc. Mal. Soc. London 25: 146 (1945).)
- 1807 - Link: Beschreibung der Naturalien Sammlung pt. 2
